

# THE ORIGINAL DECRAPPER

BY MARKO

#FDC2013  
#MODCONTEST

Width: 135mm  
Diameter: 130mm  
Weight: 680g

### Parts:

**2 suction cups** from the toilet suction pumps.

**12mm bolt (100mm long)**

**12mm nub**

**16mm washers**

**16mm nubs for the axle**

All metallic parts are bought from hardware store (K-Rauta) at the price of 11,90euros per kilogram.

Suction pumps are available at 7,45euros each.

### Procedure:

1. Suction cups already have marks for center of the cups. Use hand drill to drill a hole and expand it a little.
2. After this use saw to cut extra hub material away to make diabolo thinner.
3. Assemble

### **THE ORIGINAL DECRAPPER**

Decrapper looks convincing from the cup. Speed markings inside the cup triple feeling of danger. However diabolo is super safe to use, cup material is soft and will not hurt much when it hits you. Softer cup material also handles the Finnish winter better and when dire need will open up your toilet.

### **FROM THE SIDE**

By default Decrapper has long profile and therefore will handle all grinds well. The mass is heavily centered to its axis. 12mm bolt will handle everything you can throw at it. The same size bolts are used to build structures where people live. If it can handle structures it can handle your tricks.

### **COST ESTIMATE**

If one excludes the drilling and sawing equipment the cost of this product comes down to about 19,50euros. It might not be your cheapest option around but it is easy to make and assemble. For assembly no tools are needed.
